Test Principle

Test ELISA Structure

Enzyme-linked Immunosorbent Assays (ELISAs) combine the specificity of antibodies with the sensitivity of simple enzyme assays, by using antibodies or antigens coupled to an easily-assayed enzyme. ELISAs can provide a useful measurement of antigen or antibody concentration. There are two main variations on this method: The ELISA can be used to detect the presence of antigens that are recognized by an antibody or it can be used to test for antibodies that recognize an antigen. A general ELISA is a five-step procedure: 1) coat the microtiter plate wells with antigen; 2) block all unbound sites to prevent false positive results; 3) add primary antibody (e.g. rabbit monoclonal antibody) to the wells; 4) add secondary antibody conjugated to an enzyme (e.g. anti-mouse IgG); 5) reaction of a substrate with the enzyme to produce a colored product, thus indicating a positive reaction. There are many different types of ELISAs. One of the most common types of ELISA is "sandwich ELISA".

HISTAMINE - ISTAMINE		
HISTAMINE Stool ELISA - ISTAMINE SU CAMPIONI FECALI plasma e urina Il nuovo test FD HIS SUB HISTAMINE è un immunodosaggio elisa per la determinazione quantitativa di istamina su campioni fecali, urina e sangue intero. Il test consente di verificare in modo non invasivo, lo stato infiammatorio Intestinale e l'attivazione Immunitaria di reazione. Sensitivity: 6,1 ng/g stool.		
	FDE-3000	96 Test
The new name for the FD histamine stool EIA is FD HIS SUB ELISA. The index SUB stands for blood, urine and stool. With the help of this test, the histamine determination can be carried out in three different sample matrices.

HFD THDC ELISA - DEGRADAZIONE DELL'ISTAMINA Nuovo test ELISA per misurare la quantità di ISTAMINA degradata su campioni di siero.		
	FD-THAL-192	2x96 Test
Elisa for the determination of the Total Histamine Degradation Capacity in human sera		
AGGLUTININA DEL GERME DI GRANO (WGA) IgA/IgG Wheat Germ Agglutinin (WGA) IgA/IgG I test ELISA anti-WGA consentono una rilevazione quantitativa di anticorpi IgA o IgG specifici nel siero umano. Il test ha lo scopo di aiutare i pazienti con problemi gastrointestinali a scoprire un possibile coinvolgimento della WGA. Gli anticorpi rilevati con questo test possono essere considerati un'indicazione di una specifica intolleranza alimentare alla WGA. L'intolleranza alla WGA induce risposte immunitarie infiammatorie innescando ad esempio la produzione di istamina.		
	FD-WGA-A-96	96 Test
	FD-WGA-G-96	96 Test
Anti-WGA IgA and Anti-WGA IgG antibody Elisa tests allows a quantitative detection of specific IgA or IgG antibodies in the human serum which are directed against WGA. The test is intended to help patients with gastrointestinal problems to uncover a possible involvement of WGA. Antibodies detected with this assay may be considered as an indication of a specific food intolerance to WGA.		

Total Histamine Degradation Capacity

Nuovo test brevettato FD THDC ELISA, in grado di misurare il degrado di ISTAMINA in campioni di siero senza "provocazione" del paziente e in assenza di sintomi.

Vantaggi:

- Nessuna provocazione del paziente
- Dosaggio in assenza di sintomi
- Il paziente può continuare la sua dieta priva di istamina

Our new **FD THDC Elisa** quantifies the ability to degrade histamine in sera regardless manner. For that purpose the **FD THDC Elisa** does not measure the activity of a special enzyme but how much histamine is degraded in every sample.

TNF- α

has a major pathogenic role : in cachexia associated with chronic infectious or cancerous diseases ; in septic shock where the neutralization of TNF- α protects against the associated acute lethality ; in graft rejection and graft-versus-host disease ; and in parasitic infections where TNF- α may provide some protection but also favours more severe forms of the disease (e.g. the cerebral form of malaria). TNF- α often in combination with other cytokines, has also been involved in several autoimmune diseases and even in the pathogenesis of arteriosclerosis. Abnormal high levels of serum TNF- α have been described in septic shock, graft rejection, parasitic infections, cancer, post hemofiltrations, during in vivo cytokine (IL-2) therapy, etc. Besides an insight into pathogenesis, these determinations might provide an aid in diagnosis (e.g. in graft rejection) and have prognostic value (e.g. in systemic infections).

TNF- α

ha un ruolo patogeno importante: nella cachessia associata a malattie croniche infettive o cancerose; nello shock settico in cui la neutralizzazione del TNF- α protegge dalla letalità acuta associata; nel rigetto da trapianto e nelle infezioni parassitarie in cui il TNF- α può fornire alcune protezioni ma favorisce anche le forme più gravi della malattia (es. la forma cerebrale della malaria). Il TNF- α spesso in combinazione con altre citochine, è stato anche coinvolto in diverse malattie autoimmuni e persino nella patogenesi dell'arteriosclerosi. Sono stati rilevati livelli elevati anormali di TNF- α a sepsi, rigetto da trapianto, infezioni parassitarie, cancro, post emofiltrazioni e durante le terapie con citochine in vivo (IL-2) ecc. Oltre a una comprensione della patogenesi, il test ha un alto valore prognostico come ad esempio nelle infezioni sistemiche.

RT-6000

1 each

- Large LCD display, with touch screen.
- 96-well plate, multiple tests in the single plate.
- Westgard Multi-rule, automated QC alert.
- Plate shaking, speed and time adjustable.
- Sistema ottico bicromatico con 4 lunghezze d'onda
- Sistema a 8 canali in fibra ottica, con lettura del risultato in soli 5 secondi
- Ampio display LCD, sistema operativo WIN CE compatibile
- Agitatore di micropietra
- Esecuzione di 12 test diversi in un unico piatto
- Output multiforme del risultato, comprensivo del report completo del paziente

MICROPLATE WASHER - STAZIONE DI LAVAGGIO

RT-2600C

1 each

- Washes flat, U and V-bottom strips and plates.
- Small residual volume, multiple aspiration ways.
- Manifold with two needles for aspiration and dispensation, avoid cross-contamination.
- Liquid level detection and alert function.
- Sistema operativo di Windows, ampio display a cristalli liquidi
- Lavaggio fondo delle strisce e delle piastre rotonde o a V
- Modalità molteplice a 12 o 8, posizionamento automatico e manuale
- Ampia memoria per memorizzare fino a 50 protocolli di lavaggio
- Controllo automatico della pressione di lavaggio sulla micropietra o sulla striscia, volume e tempo regolabile
- Dispone di un sensore di livello liquidi e di un segnale di allerta
- Semplice Manutenzione

CERTIFICAZIONI

Tutti gli IVD presenti in questo catalogo sono certificati CE e soddisfanno le disposizioni della direttiva 98/79/CE e successive modifiche ed integrazioni che la riguardano - salvo diversamente indicato.

Codici, confezionamenti e specifiche tecniche possono variare in qualsiasi momento a discrezione dell'azienda.

CE marking of In Vitro Diagnostic Medical Devices - IVDD (98/79/EC)

According to the IVDD, in vitro diagnostic medical devices include: reagents, reagent products, calibration materials, control materials, kits, instruments, apparatus, equipment, and systems that are intended for use in the examination of specimens taken from the human body (tissue, blood, urine, etc.) to diagnose diseases, to monitor a person's state of health, or to monitor therapeutic procedures.
